To: House Innovation, Internet and Technology Committee
Subject: H5148

My name is Mary Adkins and I'm writing in favor of H5148, the RI Broadband Development Program for all the reasons listed in the Legislative Findings. I am a resident of Wakefield, RI, and am retired from a career with the Department of Defense. I am legally disabled due to my severe electromagnetic sensitivity. I have no opportunity for employment outside the home because of the nonstop rollout of wireless technology, and the severity of my symptoms due to involuntary exposures makes it difficult to work at all. My housing opportunities are also severely restricted accordingly because there is no consideration for those of us who must avoid exposure to radiofrequency radiation. Wireless technology has destroyed my health, depleted my financial resources due to all the medical issues it causes, and made it impossible for me to live and work the way I used to.

I have been researching the subject of pulsed radiofrequency/microwave radiation emitted from wireless devices for many years, and I know that fiber-optics to the premises is the safest, fastest, and most reliable and privacy-secure means of providing Internet access throughout RI. I want to point out one observation related to point 3 in the Legislative Findings:

(3) The telecommunications industry has been using fiber-optic cable for the past forty (40) years. Any effective fifth generation (5G) wireless network requires a fiber-optic backbone.

While this statement is accurate, to my mind it offers a loophole for the continued rollout across RI of the "small cell" antennas for 5G and the Internet of Things. With fiber to the premises (FTTP), each home and business would be connected to the Internet with the full benefits of access, and none of the harms of the wireless systems.

Here is a summary of the reasons that FTTP is superior to wireless. Fiber-optics to the premises:

- Runs directly to the home or business and allows data rates up to 1,000 times faster than wireless.
- Allows for more secure and private transmission (as wireless communications can be hacked or surveilled).
- No harmful pulsed radiofrequency/microwave radiation emissions.
- More resilient as continues to work in case of a power emergency (wireless will not run without power for the "small cell" transmitters and towers).

- Capable of transmitting tremendous amounts of data.
- Infinitely upgradable for up to 40-50 years.As the end-point electronics improve, can swap out the electronics to increase the data rate transmitted over the fiber-optic cable.
- Is not an energy guzzler, as is wireless.

More and more people are becoming sensitive to the effects of radiofrequency/microwave radiation, which can be debilitating and even lead to death. I know this because of my own firsthand experience, and also because of my role as a volunteer public health educator in this field. I'm frequently contacted by people from within Rhode Island and all across the country who have lost their health, their homes, and their livelihood due to wireless technology.

It is important that the carrier of fiber optics, which in Rhode Island tends to be Verizon, does not project Wi-Fi into the streets or involuntarily into people's homes. This is often done routinely from the utility box in the basement which is by default set up to accommodate security systems, regardless of whether these systems are in operation. Moreover, at this stage, coaxial cable connections, which are routinely done by Cox Communications, can be easier to set up for people who already know they are electrosensitive, because there is no box from which to deactivate the security system-ready Wi-Fi (which is in addition to a Wi-Fi modem), and because corded landline phones may be easier to install with a coaxial setup. From the Wi-Fi prohibiting modem, an ethernet router may be used to connect several computers without the use of radiofrequency/microwave radiation.

Our Public Utilities Commission must also make opting out of “smart” electrical, gas, and water meters easier and cost-free, as has been done in other states. These meters emit pulsed radiation 24/7 and thus create a barrier to access for people with disabilities, cancer, cardiac issues, and/or medical implants who must avoid exposure to radiofrequency radiation. One should not have to pay a monthly extortion fee for the privilege of not being involuntarily irradiated in one's home, and to require this of a disabled person who must avoid exposure for medical reasons is a blatant violation of the Americans with Disabilities Act and Fair Housing Act.

Here is a list that summarizes the harms to human health and security, as well as environmental health, from 5G wireless and the Internet of Things that 5G enables:

Health: The robust and growing *independent* science shows harms to our health from microwave radiation.

Privacy: The invasion of our privacy from the collection and mining of our digital data.

Cyber Security: The fast growing and devastating cyber security risks

Environment: The harms to wildlife, particularly bees, butterflies, and other pollinators.

Energy: The huge energy consumption to produce and power a wireless Internet of Things.

Brains and Humanity: The effects on our brains and humanity from connecting virtually every “thing” to the Internet.

E-waste: The astronomical e-waste that will be generated from connecting virtually every “thing” to the internet.

Conflict Minerals: 5G and the IoT will vastly grow our dependence on conflict minerals, which have brought about the death of close to 6 million people.

Ethics: Ethical issues arising from the IoT. New human rights laws are being considered: How should humans relate to robots and AI? The blurring of what was once a clear definition between technology and humans.

“Concern for man himself and his fate must always form the chief interest of all technical endeavors...in order that the creations of our minds shall be a blessing and not a curse to mankind.” – Albert Einstein, California Institute of Technology, February 16, 1931

For more information on 5G and why it is the wrong direction for Rhode Islanders, please see the website 5GFreeRI.com.

I hope and expect this important bill to pass out of committee and be passed in the General Assembly. Please keep in mind the benefits of fiber to the premises, and abandon the notion that 5G wireless is the only or best means to provide safe, reliable, and affordable Internet access for Rhode Islanders.

Rather than creating “Smart” cities, we have the responsibility to apply human wisdom and foresight toward the protection of our residents and the natural environment on which all of us in the Ocean State depend. Thank you for your serious consideration of my comments.

Mary Adkins, M.Ed.
