Explanation by State Budget Office:  
This bill would require audio and video recordings of all open meetings of state and quasi-public agencies and bodies to be transmitted to the Secretary of State’s Office. The Office would post recordings of all open meetings on its website to be available for public access.

Comments on Sources of Funds:  
Expenditures would be recorded as general revenues.

Summary of Facts and Assumptions:  
The Secretary of State currently does not accept video or audio recordings for Public/Open meetings. Therefore there would be internal start-up or development costs to the agency to begin to accept the new format. The agency would need time to develop the capabilities and therefore costs would be assumed to begin in FY 2017. This same issue would be present with any state and quasi-public agencies that do not currently have the capabilities of submitting in this format. The impact on other state agencies is indeterminate. The impact on quasi-public agencies would not involve a cost to the state. For purposes of this analysis, only additional costs to the Secretary of State are considered.

Summary of Fiscal Impact:  
Development Costs: It is assumed that playback technology would be accomplished through the use of YouTube or a similar technology. Internal development would focus primarily on the Office’s ability to receive the original video, store it as a “permanent record”, and transmit it to YouTube. Because this is part of the permanent record the Office would want to leave the recording unchanged in storage. Storage: The storage software would either have to be built in-house or by a third party contractor. The assumed solution would be to utilize cloud-based storage. Transmittal: It is assumed that the legislation would require that both audio and video recording must be made and submitted to the Secretary of State. The technology would need to be able to extract audio from video for separate playback. Cost of Storage and Transmission: Last year there were 18,523 total notices filed. This total would include notices from bodies that are outside the scope of the legislation. It is estimated that MP3 audio storage is 60MB/hour and 1 hour video (720p) is 900MB/hour. Meetings can last anywhere from 10 minutes to 6 hours and the average is unknown. If an average meeting length of 1.5 hours is assumed this would result in 24TB/year. This would grow linearly each year. The transmission rate would be an upload of 24TB/year and a transfer of data to Youtube at 24TB/year (so 48TB/year). Storage costs would be as follows:

Prepared by: Carmela Corte / 4012228279 / carmela.corte@budget.ri.gov  

Thursday, February 25, 2016  

Page 1 of 2  

budget.ri.gov
Year 1: $90,000
Year 2: $165,000
Year 3: $240,000
The storage costs would continue to grow each year.
Cost of Application: An unknown is whether these files would need to be stored in
the current application or rather a new application would need to be built in-house.
The associated cost to add this much multi-media data to the current application is
unknown and it is unknown how much data could be handled and would require
further research.
Cloud Edition (Amazon S3 storage)
Standard subscription: $11,950/year (1 - 10 TB inclusive of first TB, then $1,450/ TB
up to 10 TB)
Volume subscription: 10 TB+ - "$ Discounted Plans (up to 50%)"
Other Personnel: Could require additional staffing, but this is unknown at this time.
