

Chairman Solomon and members of the House Committee on Corporations,

I write in support of Rep. McGaw's H 7112. One of the best things we can do as a state to address climate change is support the growth of technologies not reliant on fossil fuels. Electric vehicles are a good step forward on this path. While we still need to ensure our electricity supply is increasingly based on renewable energy sources, reducing the use of gas and diesel and the concomitant pollution and increase in climate changing CO2 is a good idea. Please pass this bill.
