You don't often get email from stacey4ri@gmail.com. [Learn why this is important](#)

Hello, I'm writing in regards to H7176 on the possible repealing of the Renewable Energy Growth program. while I support the idea & effort to find any alternative energy sources, especially ones that are environmentally friendly ambitions of going completely "green" by 2030 were vastly overstated. It takes time to completely change over this aging in the northeast. Not only that, the implementation of the windmills & solar fields have given rise to questionable business sourcing of materials from faraway lands, unclear to destructive ways to dispose of the things when they degrade. It takes research. We definitely need clean energy, this we can agree on, especially with new technologies that strain the grid even. At this time I am respectfully in support of this bill, before we kill all the traditional way to source our energy.

thanks, Stacey J Capizzano, 172 Veazie St, PVD 02908
