

Testimony in support of H8400: Quonset Development Corporation – High Heat Waste Facilities

George Voutes, 17 Shore Road, Bristol, RI 02809

Date of Hearing: April 28, 2026

To Chair Solomon and the honorable Members of the House Corporations Committee:

I submit testimony in support of H8400.

High-heat waste facilities are extreme polluters of highly toxic and dangerous substances. As the most densely populated state in the country (behind NJ), RI can never have such a facility in our state. The risks from such a facility are off the charts and completely unacceptable to the safety and well-being of RI residents, wildlife, and the natural world we all rely on for survival.

Solid waste facilities are the worst possible kind, and will make the levels of pollution and harm from the Allens Avenue area seem pale in comparison (scary to imagine). The energy derived from the combustion of solid waste, and from the combustion of fossil fuels to run such an operation are not renewable energy; far from it in fact.

RI State lawmakers are charge with a moral mandate to protect our communities, environment, climate, and natural resources by prohibiting the construction and operation of solid waste incinerators, waste-to-fuel facilities, waste-to-chemical facilities, and other high-heat waste facilities/pyrolysis facilities—in Quonset and anywhere else in RI.

Since bills to prohibit high heat waste facilities were held and not voted on in 2023, 2024, and 2025, I urge you to not lose more time and to bring the bill to a vote in the House in 2026.

Thank you very much for considering my input, and thank you to Representative Casemiro for introducing this important bill.

George Voutes
