

Testimony in support of H7343: Pesticide Control

Barbara Walsh, 62 Frederick Street, Warwick, RI 02888

Date of Hearing: February 10, 2026

To: Chair McNamara and the Honorable Members of the House Education Committee

This is a sensible bill and deserves passage. Parents deserve to be notified when poisons are used in areas their children are exposed to, walk and play on. There are alternatives to many pesticides and rodenticides, but when these are not chosen, parents should be informed that their children have been put at risk. It really is as simple as that.
