**Subject:** RI House Bill 7295

February 6, 2024 **In Support** of RI House Bill 7295  
To the RI House Committee on Environment and Natural Resources

My name is Andrew Russell, and I support H 7295.

As a constituent of Rhode Island, I feel it is my duty to champion this bill as it signifies a step in the right direction to combat the various metals and chemicals that are being sprayed into the atmosphere for means of geoengineering as well as supposed Solar Radiation Modification (SRM). These malignant elements find their way to us, The People, and to other living beings on Earth. I have certainly not given my consent to this onslaught of harmful action that is disguised and justified as a necessity.

My voice does matter, along with many other educated voices who are growing in number. These actions perpetuated by the Federal Government consist of aerosol spraying of poisonous materials that eventually become part of the rain water we drink, if not actually part of the air we breathe. In addition, the spraying has been publicized as a needed blocking of the sun's rays to combat global warming when in fact it denies us of the essential benefits of the sun, primarily vitamin D.

There are many patents to support my declarations, and you need only to refer to any environmental expert in support of H 7295 for solid evidence. I have seen this bill get buried for one reason or another, and there is no excuse to continue doing so when the evidence is readily available.

Please do the right thing.

Andrew Russell
