Subject: Testimony re: H7295

Dear Clerk Mansolillo,

I plan to have someone read this testimony for me, as I cannot be present at this time.

To the Rhode Island House Committee on Environment and Natural Resources, re: H7295

Good afternoon, Committee. Thank you for listening to this testimony.

My name is Lisa Tener. I am sending my testimony because I strongly support the Clean Air Preservation Act H7295 and 100% oppose the program laid out in the White House document entitled Congressionally Mandated Report on Solar Radiation Modification

Link to the White House Document: <https://www.whitehouse.gov/wp-content/uploads/2023/06/Congressionally-Mandated-Report-on-Solar-Radiation-Modification.pdf>

H7295 will create governance we are clearly missing in Rhode Island. We need it immediately since this program is already being implemented and experimenting on us with dangerous pollutants.

For specific information on the processes and deployments and models used in this program, see the report, including:

- Specifically the illustration on page 14 shows the solar climate intervention methods.
- note the illustration on page 16 shows the models, processes and observations they hope to document.
- Page 20 shows the different airplanes being used for this program.

Solar Radiation Modification is immoral and I call on you to stand up for the people of our state and prohibit this dangerous and poisonous wide scale, potentially irreversible experiment. This bill does not need further study-- the White House is spelling their program out loud and clear and it is already in action. It needs to be stopped now. I do not consent to the program and I would hope everyone on this panel would not consent.

I would think the state that passed The RI Act on Climate, would be vehemently opposed to the program described in the Congressionally Mandated Report on Solar Radiation Modification, specifically the resultant pollution, radiation and chemicals that the report lays out to inflict on our environment and people of RI and USA and which has already begun.

Rhode Island has an obligation to their constituents to govern. The solution is for the state to prohibit this modification program in our atmosphere, air, etc. and H7295 is the solution to this atrocity.

Signed this fourth day of February 2024

Lisa Tener
