Support for:
House Bill No. [7081](#)

Next Generation Public Buildings Act

Dear Committee Members:

This act would prohibit the use of combustion-based heating for air or water heating in any state or municipal building open to the public, including public schools. This would apply to buildings constructed, altered or renovated from 2028 on, with some exemptions.

As a grandmother interested in leaving a healthy planet for our grandchildren, I want us to follow the science behind climate change. That is, we must curb our use of fossil fuels. Thankfully, renewable energies like wind and solar can save the day.

Please support this act so that we can work towards protecting our planet by requiring that municipal buildings that are constructed, altered, or renovated not use fossil fuels from 2028 on.

Thank you very much,
Camille Nixon,
Warren, RI 02885
