

Testimony in opposition to H7531: Act on Climate - repeal

Barbara Walsh, 62 Frederick Street, Warwick, RI 02888

Date of Hearing: March 25, 2026

To: Chair Bennett and the Honorable Members of the House Environment and Natural Resources Committee

No, no, no! Repealing the Act on Climate would be completely irresponsible and extremely harmful to our planet and health. We are burning the places where we live and choking on the pollution and emissions we purposefully emit. Voluntary actions to reduce the deadly consequences of our actions are ineffective and inefficient. A state/governmental requirement to behave differently is a necessity. Why would one advocate for the continuing destruction of where we live? If one supports eliminating the goals intended to protect the physical world needed for survival, what motives would support that? Those who make profits from polluting and poisoning our air and water would surely not support Act on Climate. But why would elected government officials not try to protect citizens/constituents from pollution and poisoning?
