Hello House Environmental Committee,

I am writing regarding this bill being heard in committee on Wednesday the 25th.

As much as I appreciate the environment & we have to be careful & good stewards of this beautiful Ocean State, I think that the Act on Climate has had an unattainable goal of going incredibly "green" in energy by 2030. I think it would be wise to repeal the original Act on Climate to further deal with details to develop clean energy that doesn't destroy the environment in the process (think windmills in the ocean, or solar fields that have cut trees in order to put it up). Also another great question looms... all this equipment will break eventually, & there needs to be an adequate plan to fix and/or dispose of it, which I'm not seeing.

I respectfully ask in agreement to pass this bill out of committee.

thank you, Stacey Capizzano in H5, PVD, 02908
