Dear Committee members,

I write in support of the Natural Forest Protection Act H 7914, which would create the first state law to protect public forests and biodiversity in Rhode Island.

Rhode Island is currently the only state in New England with no protected wildlands on public land (forests protected in their natural state from logging).

H 7914 would protect Old Growth Forests and iconic habitats on state land through the creation of the Natural Area Preserves listed in the bill.

Old Growth Forests and old mature forests are exceptionally rare in Rhode Island with only 1% of the state's forests being over 100 years old. Yet, these Old Growth Forests have a higher degree of native biodiversity, very little to any invasive species, are more resistant to wildfires, improve water and soil quality, have less ticks, and store more carbon than any other forest type.

This bill would also protect our public state forests from deforestation and natural habitat destruction through the provisions prohibiting clearcutting and other destructive logging practices on state-owned land, as well as requiring environmental review before public state logging operations are approved.

The bill would also bring back the Rhode Island Natural Heritage Program (after 19 years) to identify, monitor, and protect native biodiversity including rare and endangered species in Rhode Island.

This would allow for native biodiversity to become a priority for the state.

Please pass the Natural Forest Protection Act H 7914, so Rhode Islanders can always enjoy nature in an old undisturbed native forest, and the integrity of the natural forest ecosystem would be maintained.

Thanks for your consideration,

--
