Re: H6046 - An Act Relating to Human Services – Medical Assistance

Dear Chairman Abney and Members of the House Finance Committee:

Eastbay Community Action Program, on behalf of our board, 534 staff, and the over 30,000 residents, we serve across our programs and services strongly **support** House Bill **6046**. The bill is an investment in community health centers and is needed because:

1. Community health centers are the established primary care safety net in RI.

We are the only primary care practices that are required to:

- ❖ provide care to anyone who walks through our door
- ❖ we already publicly report data on clinical quality performance every year
- ❖ we are governed by a Board of Directors with a majority of members who are patients - ensuring the health centers meet the unique needs of the communities they serve

2. Community Health Centers are a vital component of Rhode Island's overall health care system and need to be sustained.

- ❖ Over 200,000 Rhode Islanders, or 1 in 5, access their health care through a community health center. Countless other supports are provided to the families and caregivers of our patients!

3. Community Health Centers are essential to the Medicaid Program.

- ❖ Across all health centers, 55% of patients are covered by Medicaid.
- ❖ Those patients represent about 38% of the total Medicaid enrolled population.

House Bill 6046 helps the Community Health Centers by revising an existing law that governs how the Medicaid Program pays community health centers,

RI General Law 40-8-26. House Bill 6046 revises this law in two ways:

1. The bill clarifies the existing law to reflect the full complement of health care services already provided at community health centers. Where the language currently just refers to medical care, we recommend including behavioral and dental care to accurately show all the services available at health centers today.
2. This bill establishes a floor below which Medicaid reimbursement rates cannot fall below. Community health centers need such a floor because the gap between what it costs to deliver health care, and the payment received for that care has been growing for many years. In 2019, the Medicaid rate covered 98% of a health center's costs. Today, the Medicaid payment rates to health centers only cover 85% of costs.

East Bay Community Action Program (EBCAP) is a vital Federally Qualified -Community Health Center serving 10 communities in the upper and lower East Bay regions, offering primary care, behavioral health, dental, and substance use recovery services. EBCAP's programs are designed to improve lives through education, skills training, and clinical care, reaching beyond the four walls of our health centers to meet community members where they are and out of emergency rooms.

This bill would ensure that health centers like ours receive payment that either reflects our reasonable costs or is equivalent to 125% of the median rate for all health centers. This ensures health centers can continue to provide services and keep our doors open.

We urge the Committee to approve this bill and prioritize community health centers in the final budget. Investment in community health centers saves money. In 2024 the Congressional Budget Office concluded that funding community health centers would lead to more cost-effective patient care than the care that patients would otherwise receive. Investment in community health centers will decrease state and federal expenditures in the Medicaid and Medicare programs, by reducing emergency room visits and hospital stays. More importantly, investing in health centers keeps our communities healthy and thriving!

Thank you for your consideration of these comments.
