

Testimony Urging Funding of PediPRN in HB 7127

March 23, 2026

Dear Chairman Abney and Members of the House Finance Committee:

In 2022, a workgroup of child psychiatrists and pediatricians released a declaration of a state of emergency in children's mental health in Rhode Island. As much as we might wish otherwise, children in our state continue to struggle to access critical mental health care and on behalf of the Rhode Island Council of Child and Adolescent Psychiatry, I am now writing to you to urge you to increase the Psychiatry Resource Network Funding in Article 001 of HB-7127, which would provide funding for our psychiatric phone consultation services for children and youth for FY 2027.

Given the extensive need for behavioral health services and the extreme shortage of available specialists, it is crucial that our primary care providers have the resources to support their patients and families. The PediPRN program allow primary care providers to reach out by telephone to connect immediately with child psychiatrists and psychiatrists specializing in perinatal treatment. Most of the time, consultation leads to the primary care providers continuing to manage the clinical needs of their patients in their offices. When necessary, specialty consultation and follow-up is available for those patients who need it most. Not only are patients able to receive care in a familiar setting, but primary care providers are learning new skills and strategies for providing enhanced behavioral health care. In addition, a formal "PediPRN Intensive Program" has been offered to provide teaching in children's behavioral health to pediatricians.

PediPRN, which is run through Bradley Hospital, was founded in 2017 and funded by a 5-year Health Resources and Services Administration (HRSA) grant in partnership with the Rhode Island Department of Health and with additional support by Blue Cross/Blue Shield of RI. There is no funding in the budget proposal allocated for PediPRN. Without funding, PediPRN will run out of money at the end of September, 2026. The budget needs to include \$630,000 for FY 2027 (July 2026- June 2027) to sustain PediPRN. As written, HB-7127 has funding available for RI MomsPRN, but no funding allocated for PediPRN. PediPRN does not have sufficient grant funding to remain operation for the entire State Fiscal Year 2027, and Rhode Island will lose this valuable resource unless the budget proposal is amended to include this funding.

According to the **Rhode Island KIDS COUNT 2025 Factbook**, the following were true 2022-2025:

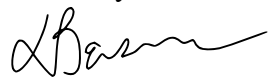

- In Rhode Island in 2022-2023, more than half (52%) of children ages three to 17 who needed mental health treatment or counseling had a problem obtaining needed care
- In State Fiscal Year (SFY) 2024, 30% (37,143) of children under age 19 enrolled in Medicaid/RIte Care had a mental health diagnosis
- In SFY 2024, 1,294 children under age 19 enrolled in Medicaid/RIte Care were hospitalized due to a mental health related condition (up from 959 in SFY 2023), and 3,308 children had a mental health related emergency department visit (up from 2,598 in SFY 2023)
- In 2023, 3,074 emergency department visits took place for children with a primary mental health diagnosis
- In 2023, children were hospitalized 1,962 times for a primary mental health diagnosis
- In FY 2024, the number of calls to Kids' Link RI, an emergency phone crisis service for families, declined to 5,386 but remained above pre-pandemic levels

Meanwhile, our primary care providers remain the steadfast first line for children and families seeking crisis, acute, and chronic treatment for depression, anxiety, ADHD, eating disorders, self-injurious behaviors, suicidal behavior and attempts, aggression, developmental disabilities, and more. They are experts in caring for children but often need additional guidance and training to provide specialized behavioral health care. PediPRN allows them to do this with confidence and safe back-up when needed.

Our colleagues across Rhode Island are working harder and more collaboratively than ever to make sure our children and families are healthy, physically and emotionally, in the face of significant hardship and increased stressors. Adequate funding for the Psychiatry Resource Network programs, including PediPRN, will provide additional support and resources to all of us as we continue to do this work. We sincerely and respectfully urge you to take this step on behalf of us healthcare providers for children, but especially on behalf of the most vulnerable Rhode Islanders, our children.

Thank you very much for your consideration and your support for increasing the funding for the Psychiatry Resource Network Programs by \$630,000 in HB-7127.

Sincerely,

Daisy Bassen, MD DFAACAP, (President) on behalf of the RI Council for Child and Adolescent Psychiatry
