Subject: Naturopathic medicine study commission support

Dear Study Commission members, I Jessica King, am writing to ask for your support of passing of this bill to improve patients' accessibility to medical care from licensed Naturopathic Physicians. Passage of this bill is very important to me. Without the help I have received from my Naturopath, I would not be looking at my precious 3 week old right now. I sought help after 5 miscarriages and being told by medical doctors I have unexplained recurrent miscarriage. My Naturopath from ANASA medicine in Providence, put me on a diet and herbal medication to treat me for the reason I was having miscarriages and also underlying GI symptoms. It is quite expensive to seek fertility treatment with insurance and not receive answers. It does not make sense for one type of doctor to be covered through insurance and others like Naturopaths, whom often find simple diet/herbal solutions for medical problems, to not be covered by insurance.

Thank you for your consideration.

Sincerely,
Jessica King and baby Hunter
