I'm writing this email to state my support in Registered Nurses and Nurse Practitioners to continue providing aesthetic treatments in the state of RI. I honestly wouldn't want anyone other than an RN or NP providing this treatment. Most of the RNs I know in this industry have given these sort of injections for years where physicians actually haven't provided the actual treatment. Experience and hands on means more to me than anything and honestly I trust a nurse more than I do a doctor for this sort of thing. If the state is going to take away the rights/ability of nurses to perform this I will then go spend my money over the border in another state such as Massachusetts.
