Providence, Rhode Island 02903

RE: Support with Edits for H6037 - An Act Relating To Businesses and Professions
–Pharmacies

Dear Chairwoman Donovan,

We appreciate the efforts that have been put into establishing new vaccine regulations for the State of Rhode Island through H6037.

Being a pharmacist in a community setting, I see the importance of making vaccines highly accessible, especially for underserved and low-income populations.

I am in full support of H6037, as I believe that pharmacists are important resources for our healthcare system and being easy to access is a huge factor for immunizations.

As a pharmacist, I have had the privilege of administering vaccines to hundreds of children over several years when pharmacists were permitted to do so during the pandemic. It is of utmost critical importance to edit the law to allow pharmacists to continue administering all childhood vaccines. Graduating in 2020, I was permitted to vaccinate children ages 3 and up in accordance with the Prep Act, which was an opportunity I acted on in hopes to help my community. I did not require any special training to fulfill this role, as a pharmacist, I already felt very well equipped through my education and experiences. In May 2023, when the Prep Act Expired and pharmacists lost the right to vaccinate children, I felt that our community was the ones that truly suffered, as accessibility to these vaccines became much more scarce.

The responsibility to vaccinate children was just that, a responsibility. No longer having this right makes me feel that we as a profession are not being utilized to our fullest potential to help improve public health goals. Pharmacists have been comfortable and well trained to vaccinate kids since the start of the pandemic, renewing this privilege will make access to vaccines simpler for our community.

There are so many ongoing issues in regards to the accessibility of vaccines for children. We are each striving for the same common goal in regards to vaccines; to prevent the spread of disease within the population for better health outcomes. Thank you for bringing to light this

important issue, as we as pharmacists are grateful for your support in improving accessibility of routine childhood vaccines for Rhode Islanders. Strengthening these policies is very important for the people of our state and I am eager to help with this cause to advocate for public health.

Sincerely,

Jordan Villella
