**Subject:** House bill H 6151

My name is John Holscher. I live in Cranston with my wife Joyce Sampietro-Holscher and we are writing in OPPOSITION to H-6151

We believe the health concerns expressed by numerous independent scientists regarding the safety of EMF exposure be thoroughly examined before allowing this technology to be implemented. Some of their concerns are that prolonged EMF exposure affects the nervous system and brain, DNA mutation, and infertility.

These are serious questions that need to be answered before the 5G network is deployed. We can't afford to risk the health and wellbeing of our families, friends and neighbors.

The fact that, as the bill's text states, "*public safety shall 4 not include requirements relating to radio frequency emissions of wireless facilities*" should be a disqualifier in and of itself!

How can you even consider legislation that dismisses valid public safety concerns?!

We urge you to oppose passage of this bill.
