

Hello - My name is Jay Keith; CD-1 North Smithfield, RI. I am writing this body today to urge the RI legislature to pass HB7797 to cease all COVID vaccine mandates.

The decisions that this state and this body made during COVID should send chills up the spines of any free thinking, American and Rhode Islander.

The state implemented a "one size fits all", no questions asked, medical mandate that went against all common sense and general consensus regarding bodily autonomy and science.

To this day, the state has not provided accurate data on COVID vaccine injuries directly related to the vaccine mandate implemented by this body.

The state of Rhode Island broke hundreds of years of American tradition and the sovereignty of the individual; the smallest minority in America.

As the data, science and aftermath now prove, the state's heavy handed approach to COVID 19 vaccines cost lives, jobs and destroyed the sanctity of the Patient/Doctor relationship as well as the Citizen/Government relationship.

The State of RI and the Federal Government used threats of economic terrorism to coerce citizens to violate their own bodies or risk being punished. Punished for simply not wanting to be a test subject for the states' psychotic public health policy.

All this was done AFTER the SCOTUS clearly struck down the mandate as Unconstitutional.

My family was coerced by this state to violate our own bodies or risk losing our jobs, home and everything our family has worked for.

None of us wanted the Covid Vax when Democrats were telling us not to take it under Trump, I am not sure why you all believed that we wanted it mandated under Biden.

To this day, the state of RI hasn't provided any data or discussion on Covid 19 Vax injuries.

I have personally had friends who have died or who now live with odd neurological problems days after getting the covid vaccine.

In the pandemic, my mother in law, a cancer survivor - received the vaccine, 1 year later - her cancer returned and she died.

My family doesn't have the money for lawyers or to fight the state..... We have to just accept what this state has done with no recourse.

Had we been allowed to make our own choices for our own bodies, we would not have the regret, guilt and despair that this state has brought to our families.

The state's negligent approach to this particular vaccine was in my opinion, criminal and a vulgar display of power and politics.

Dan McKey and the health officials in this state that participated in this mandate, should be removed from office and charged with crimes against humanity for their role in this gross display of ignorance that cost lives.

The decisions that were made surrounding covid and the covid vax in this state, were no different than 1930s Germany.

This body and the state reps should all be ashamed at what you have done. History will not be kind to our state.

Allow me to cite a few of those comparisons lest you believe that this is hyperbole:

1. The Governor of RI posted State Police at the border of RI to check papers
2. The State forbid families from seeing dying loved ones
3. The State forced RI'ers to show medical information to get into recreational events
4. The State propogandized our children against their own families who disagreed with the states covid policies
5. The State colluded with corporations and unions to implement unconstitutional health policy under threat of violence and terrorism from the state
- 6.. The State Colluded with the Teachers Union to prolong school closures
7. Dan McKey withheld the test scores of the students until after his election because of the dip in scholastic achievement from the prolonged closures.
8. The state withheld information on the Covid 19 Vax injuries as they were pushing people to take it
9. The state leveraged their monopoly on violence and used threats of economic terrorism against Americans who didn't want to violate their own bodies with a junk science vax.
10. The state has left families with no recourse, stole their careers and treated anyone who didn't comply as an enemy of the state.

In the last 8 years, we have seen a new scourge of Fascism in our country. It's called "Democratic Nazi Fascism" or the illusion of choice.

They say "No one was forced to take the shot" - You didn't have to take the shot, but your company would take your job if you didn't and the state afforded them that power.

This body will never be able to escape the reality that you literally created a policy that hurt more people than it helped.

The mandates need to end globally - however, this body can begin to accept their culpability for this atrocity by passing HB7797 and ensuring that no American will ever have to make a choice between feeding their family or violating their own body ever again.

Never again, is NOW - do the right thing for Rhodelslanders for once and bring our 1st responders back. Our state told them they were heroes on Monday and by Friday, the state threw them all away because they didn't want or need the junk science covid 19 vaccine.

Respectfully,

Jay Keith
