

I reside in Smithfield where the building of over 700 condo units, all with LMI provisions, is consuming the untouched rural landscape of this town. These changes would halt the fast paced process occurring to procure land and build housing simply to receive the financial gain from erecting condos quickly and so close to one another you can shake hands through the kitchen window!

Please support this legislation, reconsider with solid input from the towns and cities, what are the best, sustainable options for affording housing for all people, not to the exclusion of existing residents who lose what they purchased their homes for...a quiet rural landscape with appreciation and protection for the natural neighborhoods they chose to live in.
