American Heart Association, Campaign for Tobacco-Free Kids

DATE: March 30, 2026

RE: Support for House Bill 8346

Our organizations appreciate the opportunity to provide testimony in strong support of House Bill 8346, which would codify the Rhode Island Tobacco Control Program and increase funding for our state's tobacco prevention and cessation efforts. With continued uncertainty surrounding federal funds and tobacco prevention infrastructure, combined with consistent underinvestment at the state level, we respectfully urge the General Assembly to provide additional funding for the Rhode Island Tobacco Control Program.<sup>i,ii</sup>

Tobacco use remains the single largest preventable cause of disease and premature death. More than 16 million Americans are living with a disease caused by smoking.<sup>iii</sup> Smoking causes cancer, heart disease, stroke, lung diseases, diabetes, and chronic obstructive pulmonary disease (COPD), which includes emphysema and chronic bronchitis.<sup>iv</sup> As lung cancer remains the top cancer killer in the state, tobacco continues to claim the lives of 1,800 Rhode Islanders each year.<sup>v,vi</sup> Unfortunately, Rhode Island is on the wrong path when it comes to tobacco use. Currently, around 10% of adults smoke and 17.3% of high school students in Rhode Island use tobacco products.<sup>vii</sup>

In addition to the lives lost, smoking causes significant monetary costs in Rhode Island. Annual health care costs in Rhode Island directly caused by smoking amount to \$744 million, including \$233 million in Medicaid expenses related to smoking each year. The state and federal tax burden from smoking-caused government expenditures is \$1,198 per Ocean State household. Finally, smoking-caused productivity losses in Rhode Island accounted for \$1.1 billion just last year.<sup>viii</sup> In addition to the catastrophic health impacts of tobacco use, there is a clear economic impact on Rhode Island also present.

Given the wide-ranging impacts of tobacco use in the Ocean State, comprehensive tobacco control programs seek to impact more than just tobacco use rates. Tobacco control programs serve to address broader issues caused by tobacco-related health and social costs by protecting

the state's under-resourced communities and residents who have been marginalized from the ravages of tobacco use, optimizing population health, and minimizing preventable health care expenses, thus laying the foundation for a healthy, productive, and resilient workforce.

**Rhode Island must establish sustainable funding for tobacco prevention and cessation programs at levels that meet or exceed Centers for Disease Control and Prevention (CDC) recommendations.** Comprehensive tobacco prevention and cessation programs are a proven, cost-effective method of preventing kids from starting to smoke, preventing e-cigarettes and nicotine pouches from addicting a new generation of kids, and helping adults quit smoking.

Despite collecting over \$156 million in tobacco-related revenue, our state invests just \$793,114 in prevention and cessation for FY 2026.<sup>ix</sup> We must do more. CDC recommends that Rhode Island spend \$12.8 million annually, leaving significant room for improvement. In fact, Rhode Island ranks a disappointing 41<sup>st</sup> in the country in funding programs that prevent kids from starting to use tobacco and help people who are already addicted quit.<sup>x</sup> With the consistent and ongoing threat of the loss of federal funds supporting state tobacco prevention and cessation efforts, we are at risk of falling even further behind. We must step up our game when it comes to combatting Big Tobacco, since tobacco companies are spending over \$27 million to promote their deadly and addictive products right here in Rhode Island.<sup>xi</sup> Adequately funding tobacco prevention and cessation work in the Ocean State is critical to countering these efforts.

Unless tax rates are consistent across tobacco products, the lesser cost products become even more appealing to price-sensitive consumers like kids. By increasing the tax on all tobacco products to an equivalent rate, Rhode Island will generate more new revenue for tobacco prevention and cessation, prevent initiation of these products, and ensure that more people who use tobacco quit completely instead of switching to a cheaper product. **To curb adult smoking and youth initiation, and raise additional revenue to improve Rhode Island's tobacco prevention and cessation infrastructure, we must prioritize a comprehensive evidence-based approach to taxation by:**

- Increasing the per-pack tax on cigarettes by at least \$1.00 (generating *\$9.56m in projected revenue*)
- Removing the cigar tax cap (currently \$0.50/cigar)
- Raising the tax rate on electronic cigarettes to 80% of wholesale price and eliminating the volume-based component currently in place
- Changing the tax on "snuff" products to 80% of wholesale price

Increasing the price of tobacco products, including e-cigarettes through taxation, is one of the most successful ways to keep youth from starting to use tobacco and help adults quit, saving lives and healthcare costs along the way. While significant cigarette tax increases effectively reduce adult smoking and prevent youth initiation, data indicates that smaller increases simply raise more money for the state without measurably improving public health. According to a projection by the American Cancer Society Cancer Action Network, Campaign for Tobacco-Free Kids, and Economics for Health, a \$1.00 per pack increase in Rhode Island's cigarette tax would reduce youth smoking by nearly 7%, help 1,800 adults who smoke quit, and save 500 lives.

Additionally, this cigarette tax increase would save Rhode Island \$28.25 million in long term health care costs and generate \$9.56 million in new annual revenue.

The tobacco control program funding request for which we ask your support here today is backed by extensive science, evidence, and success stories from other states. Historically, states that have continually invested in their comprehensive tobacco control programs have greater savings. These states have experienced reduced cigarette sales, declining smoking rates among youth and young adults, and smoking-attributable health care expenditure savings.

If Rhode Island is serious about fighting the death and disease caused by tobacco, passing House Bill 8346 is a critical step. We respectfully urge your support of this legislation and thank you for the opportunity to provide testimony. Please feel free to contact us with any additional questions or information. Thank you for your consideration.
