

Dear Representatives,

It is ever more URGENT to pass this beginning bill to reduce plastic waste because of the health hazard effects on all people around the world.

According to the New England Journal of Medicine, microplastics are now found in our carotid arteries and are now a cause of heart attacks, stroke and other diseases.

There are now more plastics, by weight, than fish in the oceans.

Please pass this bill for my children and grandchildren,

Roberta Houllahan
