**RE: SUPPORT – S2888 - Pharmacists & Tobacco Cessation Therapies**

Dear Chair Murray and members of the Committee:

I am submitting this letter to state my complete **support of S2888** authorizing pharmacists to prescribe and dispense tobacco cessation therapy medications.

I have been a community pharmacist for 26 years and have witnessed the education and support needed by patients attempting to quit smoking. Pharmacists are often the first healthcare provider to assess a patient's readiness to quit and provide targeted, patient-centered education to support a successful quit attempt. Further, our access may easily identify high risk patients, reduce attributed costs, concierge referral to additional quit resources and provide access during off-hours for alternate services. Additionally, it is well known that complete tobacco cessation can require in excess of 10-15 quit attempts and success is strongly correlated to how many touchpoints patients receive through their attempts, often weekly for several months. This increase in access via pharmacists in all healthcare settings can support patients who require frequent follow-up and complement those with established providers.

**S2888** would align with numerous states that have authorized pharmacists to prescribe tobacco cessation aids. Pharmacists are the medications experts, accessible in a 24/7 fashion, yielding improved public health and healthy equity throughout our Rhode Island communities.

Sincerely,

**Ginger Lemay, PharmD, CDOE, CVDOE**
